Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

available to TIGR and Genbank. The following quality assessment of this set was done by comparison with known proteins: two percent the clones are estimated to be 5'-truncated; less than one percent are 3'-truncated; approximately two percent represent alternative splice variants, including unspliced introns and spliced exons; one frame shifts in a coding region. A sequence is considered to be 5'-truncated if it lacks the translation initiation start (ATG). A sequence is considered to be 3'-truncated if it lacks the certain polymorphisms when compared to sequences are derived from the Ws or LAer ecotypes and therefore may contain polymorphisms when compared to sequences from Col-0. Genset carried out the library production and sequencing of the full-length clones. Ceres, Inc. carried out the clustering of the coances, selection of clones, and sequence assembly.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          /protein id="AAM61033.1"

## ALIGNMENTS

RESULT 1

New nucleic acid fragment encoding a lysophosphatidic acid acetyltransferase (LPAAT) isozyme, useful for creating transgenic plants which encode LPAAT at higher or lower levels than normal. The present sequence encodes a lysophosphatidic acid acetyltransferase (LPAAT) isoenzyme. The nucleic acid may be used to create transgenic plants which encode LPAAT at higher or lower levels than normal or in cell types or developmental stages in which they are not normally found.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           900
This would have the effect of altering the level of specific triacylglycerols in those cells, for e.g. overexpression of an LPAAT similar to the maize LPAAT will result in higher oil content in the seed, stem and leaf. LPAAT chimeric genes may be used for co-suppression of genes encoding LPAAT. The polynucleotides may also be used as probes for genetically and physically mapping the genes that are a part of, and as markers for traits linked to those genes
                                                                                                                                                                                                                                                redecardecrarrecadeacedeceredregracearredecerecretrerredecr 180

The invention relates to nucleic acids encoding novel plant

acyltransferase-like proteins (AAA37343-A3745) which comprise one of 8

conserved acyltransferase motifs (AAY99474-Y99481). Acyltransferases

catalyse the transfer of acyl groups from a donor to a variety of

substrates such as glycerides, sterols, stanols and phosphatides. Such

enzymes play a key role in lipid synthesis, and thereby affect the

characteristics of the plant. For example, cold-hardened plants have

different lipid concentrations in the cell membrane compared to non
characteristics of the plant. For example, cold-hardened plants have

different lipid concentrations in the cell membrane of luid and the plant more

characteristics of for expressing acyltransferase-like proteins in

can be used as probes or for expressing acyltransferase-like proteins in

host cells e.g., for recombinant protein production. They may be

expressed in plant cells to alter the lipid composition of the plant

e.g., for the production of chill-resistant plants, or for altering the

composition of plant oils. The present sequence represents DNA encoding

composition and acyltransferase (LPAAT) Novel acyltransferase related proteins useful for altering fluidity in plant cells e.g. to induce chill tolerance. Van Ž Ž Example 5; Page 98; 126pp; English. Limnanthes clone 1 (AAT35205) was obtd, by heterologous screening of a Limnanthes douglasii seed cDNA library using a 600 bp NcoI/PstI fragment of a rape 2-acyltransferase (2AT) clone corresponding to the N-terminus of the rape protein. It encodes the protein given in AAR99249. Another isolated clone (AAT35204) codes for the Limnanthes 2AT (AAR99248) useful for improving the erucic acid content of transgenic plants \*\*\*\*\*\*\*\*\*

The present sequence encodes a lysophosphatidic acid acetyltransferase (LPAAT) isoenzyme. The nucleic acid may be used to create transgenic plants which encode LPAAT at higher or lower levels than normal or in cell types or developmental stages in which they are not normally found. This would have the effect of altering the level of specific triacylglycerols in those cells, for e.g. overexpression of an LPAAT similar to the maize LPAAT will result in higher oil content in the seed, stem and leaf. LPAAT chimeric genes may be used for co-suppression of genes encoding LPAAT, The polynucleotides may also be used as probes for genetically and physically mapping the genes that are a part of, and as markers for traits linked to those genes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               269 TCGATAAGGCCGTTCTCGAAGAGCTTGTACCGGCGGATCAACAGGTTCTTGGCCGAGCTG 328
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New nucleic acid fragment encoding a lysophosphatidic acid acetyltransferase (LPAAT) isozyme, useful for creating transgenic plants which encode LPAAT at higher or lower levels than normal.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       GGCCTGCTCCTTCGCCTCCGGCCTCCTTGTTAATCTCAGGCAATATGCTATGTC

```
The present sequence encodes a lysophosphatidic acid acetyltransferase (LPAAT) isoenzyme. The nucleic acid may be used to create transgenic plants which encode LPAAT at higher or lower levels than normal or in cell types or developmental stages in which they are not normally found. This would have the effect of altering the level of specific triacylglycerols in those cells, for e.g. overexpression of an LPAAT similar to the maize LPAAT will result in higher oil content in the seed, stem and leaf. LPAAT chimeric genes may be used for co-suppression of genes encoding LPAAT. The polynucleotides may also be used as probes for genetically and physically mapping the genes that are a part of, and as markers for traits linked to those genes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           78 crcrcrcccddcdcacacrarccaddccararrarcragacgaraag
                                                                                                                                                                                                                                                                                                                                                                                                                     New nucleic acid fragment encoding a lysophosphatidic acid acetyltransferase (LPAAT) isozyme, useful for creating transgenic plants which encode LPAAT at higher or lower levels than normal.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         GTGTCGAAAAGTTTGTACAGAAGGATCAACCGGGTAGTAGCAGAGCTCTTGTGGCTGGAG
